

exogenous event

```
openSubmission(Person);  
inst event iopenSubmission;  
openSubmission(A) generates  
    iopenSubmission(A)  
    if isChair(A);
```

```
iopenSubmission(A) initiates  
    perm(icloseSubmission(A)),  
    pow(icloseSubmission(A));
```

```
iopenSubmission(A) terminates  
    pow(iopenSubmission(A)),  
    perm(iopenSubmission(A)),
```

External event is recognized, generating institutional event, iff A is the PC chair. This is part of the \mathcal{G} relation

The institutional event causes the addition of some powers and permissions to the institutional state so that papers can be submitted and submission can be closed. This is part of the \mathcal{C} relation.

...and the deletion of powers and permissions associated with opening submission. This is also part of the \mathcal{C} relation.
